Figure 10	Percentage of Dead Drivers who had a Blood Alcohol Level above the Legal Limit.	148

Notes

1. The data in this section is derived by matching MoT's Traffic Crash Reports with blood alcohol measurements taken as part of post mortem examinations for dead drivers.
2. In cases where the driver dies at some time after the crash, the blood alcohol level measured in a post mortem examination may be different to that present at the time of the crash.

Summary

1. Of the 237 drivers/riders who were killed in road crashes in 2005, 171 (72%) were given a blood test to detect the presence of alcohol.
2. 45 drivers had a blood alcohol level above the legal limit (including one driver under 20 years with a blood alcohol level between 30 and 80mg/100ml). That is, 26% of those tested and at least 19% of the total number killed were above the legal limit.
3. A number of those not tested may also have had a blood alcohol level above the legal limit, so the percentage of killed drivers who were above the legal limit is likely to be higher than 19%. An estimate of the number of untested drivers who may have been above the legal limit can be made by assuming that the alcohol involvement rate for untested drivers with 'alcohol suspected' is the same as that for the tested drivers with 'alcohol suspected' and similarly for drivers with 'alcohol not suspected'. For 2005 this estimate gives a further 13 drivers likely to be above the legal limit. Hence, based on the above assumptions, and the presently available data, a likely estimate is that about 25% of all the drivers killed were above the legal blood alcohol limit.

Table 7

**Blood Alcohol for Fatally Injured Drivers
Historical**

Year	Number of killed drivers (A)	Number tested (B)	Percent tested	Number over legal limit (C)	Percent of drivers over legal limit (C/A)	Percentage of those tested over the limit (C/B)	[--- Adjusted for non-testing # ---]	
							Best estimate of number over the limit	Best estimate of percent over the limit
1987	438	325	74%	151	35%	47%	185	42%
1988	395	282	71%	122	31%	43%	156	40%
1989	413	292	71%	135	31%	44%	162	39%
1990	374	277	74%	137	37%	50%	172	46%
1991	342	240	70%	108	32%	45%	138	40%
1992	361	240	67%	98	27%	41%	129	36%
1993	333	233	70%	88	26%	38%	106	32%
1994	333	252	76%	105	32%	42%	127	38%
1995	314	237	76%	78	25%	33%	93	30%
1996	283	201	71%	66	23%	33%	84	30%
1997	304	218	72%	46	15%	21%	63	21%
1998	271	183	68%	56	21%	31%	74	27%
1999	293	215	73%	50	17%	23%	61	21%
2000	273	179	66%	55	20%	31%	58	21%
2001	267	204	76%	44	17%	22%	55	21%
2002	246	198	81%	52	21%	26%	60	24%
2003	262	191	73%	59	23%	31%	70	27%
2004	255	197	77%	57	22%	29%	69	27%
2004	237	171	72%	45	19%	26%	58	25%

This gives the best estimate of the number and percentage of all killed drivers likely to have a blood alcohol level over the legal limit after adjusting for the 30% or so of drivers that are not tested. See note 3 in the summary for more detail.
