

Rail safety statistics

QUARTERLY STATISTICS FOR THE PERIOD ENDED 30 JUNE 2012

Prepared by Financial, Economic and Statistical Analysis, Ministry of Transport

Rail safety statistics

July 2012

This report is based on rail occurrence reports provided by rail operators. These reports cover a wide range of occurrences including both accidents (events that caused death, injury or significant property damage) and incidents (events that placed, or could have placed, someone or something at risk of death, injury or significant property damage). Only a relatively small number of occurrences result in injury or significant property damage. The less serious occurrences are useful for identifying potential safety issues.

Key points

This quarter there have been:

712	reported occurrences, resulting in
5	deaths
34	injuries
0	deaths in level crossing accidents
2	injuries in level crossing accidents
4	deaths in person on track accidents
1	injury in person on track accidents
1	death in operating accidents
31	injuries in operating accidents

In the last 12 months there have been:

2307	reported occurrences, resulting in
16	deaths
120	injuries
3	deaths in level crossing accidents
13	injuries in level crossing accidents
12	deaths in person on track accidents
6	injuries in person on track accidents
1	death in operating accidents
101	injuries in operating accidents

Note that rail deaths can include suicides.

NOTES:

- A database was initiated during 1993 to collate information about rail occurrences. Previously the only rail safety data collected at a national level was for level crossing motor vehicle crashes attended by the Police.
- Occurrence reports are provided to the Ministry of Transport and the New Zealand Transport Agency by rail operators, usually within 72 hours of the occurrence or when enough information has been compiled.
- Caution should be exercised in interpreting the statistics in this report in the light of the small number in some categories and the short time periods involved.

Reporting of occurrences

From late 2011 the NZ Transport Agency and rail operators have been working together to increase the reporting of all occurrences, including near misses and behaviour or situations that could lead to accidents. This helps to identify safety issues before they result in accidents that cause property damage or injury.

At least some of the increase in reported occurrences from previous reports is likely to be due to this focus on improved reporting, rather than a decrease in safety.

Level crossings

Definition: occurrences at a level crossing (public or private) involving a motor vehicle, a pedestrian or a pedal cyclist. Occurrence reports can give information about the type of protection present at the level crossing.
