I completely support this bill. We are in a climate crisis and action needs to be taken immediately. We purchased an electric vehicle earlier this year and love it. There is still a lot of caution regarding electric vehicles and this bill, with subsidies would go along way to encouraging New Zealanders to switch to electric or lower emission vehicles. additionally the standards would increase the availability of lower emission cars on the market. As said in the discussion document, the majority of NZs electricity comes from renewable resources, let's build on the use of these awesome resources rather than importing polluting fuels.
